illness, obsessive-compulsive disorder, schizophrenia and mood disorders (such as bipolar disorder, unipolar depression, dysthymia and seasonal effective disorder) and dystonia (movement disorder), sleep disorder, muscle relaxation and urinary incontinence. The peptide can also be used to treat HIV infection, ophthalmic indication and memory, learning or cognitive defects
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cone

Conantokins differ from conotoxins, in that they contain gamma-carboxyglutamic acid. The conantokins are derived from the venom of cosnails. They are used for the treatment of disorders in which the pathophysiology involves excessive excitation of nerve cells by excitatory amino acids or agonist of N-methyl-D-aspartate (NMDA)
                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Use of conantokin peptide or its derivatives or a conantokin peptide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to an antibody specific for (-5,-6 and -7)-proPSA (prostate-specific antigen), but with no reactivity with (-4) or shorter forms of the protein. The antibody can be used to diagnose prostatic carcinoma and to detect human pro-kallikrein 2. The present sequence is a peptide which forms part of a peptide-containing immunogen described in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Antibody comprising specificity for some truncated forms of pro-prostate specific antigen, useful in immunoassays for differential diagnosis of prostatic carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PSA; prostate-specific antigen; prostatic carcinoma; pro-kallikrein 2;

The invention related to modified neurotoxins especially Clostridial botulinum toxins with altered biological persistence. These toxins comprise a structural modification which is effective to alter the biological persistence. Modified neurotoxins of the invention are used for treating biological disorders which include neuromuscular disorder e.g. strabismus, blepharospasm, spasmodic torticollis (cervical dystennia), oromandibular dystonia and spasmodic dysphonia (laryngeal dystonia), autonomic nervous system disorders e.g. excessive salivation and sweating, asthma etc. and pain e.g. headache, muscular tension, neuralgia and neuropathy. The present sequence is botulinum toxin serotype A (BoNT/A) N-glycosylation site. This peptide is derived from C. botulinum
                                                                                                                                                                                                                                                                                                              Modified neurotoxin especially Clostridial toxins, useful for treating neuromuscular and autonomic nervous system disorder and pain, comprises structural modification to alter biological persistence of neurotoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Protein quantification; protein identification; signature peptide; mass spectrometric analysis; proteolytic peptide; affinity ligand; arginine; isobaric peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        C-terminal sequence of an arginine-containing peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DB 5; Le

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to an antibody specific for (-5,-6 and -7)-proPSA (prostate-specific antigen), but with no reactivity with (-4) or shorter forms of the protein. The antibody can be used to diagnose prostatic carcinoma and to detect human pro-kallikrein 2. The present sequence is a peptide which forms part of a peptide-containing immunogen described in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antibody comprising specificity for some truncated forms of pro-prostate specific antigen, useful in immunoassays for differential diagnosis of prostatic carcinoma.
                                                                                                                                                                                                                                                                                                                             PSA; prostate-specific antigen; prostatic carcinoma; pro-kallikrein 2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

The present invention relates to diverged delta-9 fatty acid desaturase proteins and polynucleotides enceding such proteins. The nucleic acid sequences may be used to increase the level of unsaturation in cellular lipids, including oil, in tissues when the enzyme is absent or rate-limiting, to isolate cDNAs and genes encoding homologous proteins from the polypeptides are present at higher or lower levels than normal or in cell types or developmental stages in which they are not normally found, those cells. They are useful as probes for genetic and physical gene mapping and as markers, e.g. restriction fragment length polymorphism (RPLP) markers. The peptides can be used to immunise animals to produce antibodies specific for the peptides and proteins. The produce antibodies and delta-9 fatty acid desaturase peptide (residues 256-
                                                                                                                                                                                                                                                                                                         New delta-9 fatty acid desaturase polypeptides and polynucleotides, useful in creating transgenic plants having altered levels of mono-, poland unsaturated fatty acids and in increasing the unsaturation levels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               원
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to analysing differences in protein content among plural protein samples comprising employing mass spectrometric analysis of plural protein samples comprising employing mass spectrometric analysis of proteolytic peptide fragments. The method comprises fragmenting at least a first protein sample and a second protein sample to produce a first peptide pool and a second peptide pool; isotopically labelling at comparing a permit resolution of otherwise identical peptides in the first and second peptide pools by mass analysis; contacting peptides from at least a portion of both of the peptide pools with a capture moiety to yield affinity-selected peptides comprising an affinity ligand, where the capture moiety selects for the affinity ligand; and analysing the affinity-selected peptides by mass spectrometry to determine one or more affinity-selected peptides by mass spectrometry to determine one or more affinity useful for identifying one or more proteins in a single complex mixture. The method is also useful for quantifying proteins in a single complex mixture. The method is also useful for quantifying proteins in a sample or several samples. The advantages of the novel method are that it is easier to separate peptides than proteins; native structure of the complex decomplex mixture, and maintained during the analysis; structural contactions and not interfere.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                   Analyzing differences in protein content in protein samples, useful for identifying protein(s) in a sample or multiple proteins in a single complex mixture, by employing mass spectrometric analysis of signature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  variants do not interfere; and putative proteins suggested from DNA database can be recognised by using a signature peptide probe. The present method permits identification of a protein in a complex sample without purifying the protein or obtaining its composite peptide signature. The present sequence is C-terminal fragment of a differentially acetylated arginine-containing peptide which is used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

The invention describes an isolated human transporter peptide (I) that is related to the gamma-aminobutyric acid (GABA) neurotransmitter transporter subfamily. (I) and the nucleic acid encoding it (II) can be used as models for the development of human therapeutic agents that modulate transporter activity. (I) is used to raise antibodies or to elicit another immune cetivity. (I) is used to raise antibodies or to elicit another immune response, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, and as markers for tissues in which the corresponding protein is preferentially expressed. The transporter proteins isolated from humans and their human/mamalian therapeutic applications, and biological assays related to transporter proteins that are related to members of the GABA neurotransmitter cransporter subfamily. The proteins and peptides also provide a target for diagnosing a disease or predisposition to disease mediated by the proteins and are useful for treating a disorder characterised by absence of inappropriate, unwanted for altered expression of the protein. The attibodies are also useful for assessing normal and aberrant subcellular pharmacogenomic analysis, for tissue typing and for inhibiting protein that are transporter typing and for inhibiting protein function. (II) is useful for constructing recombinant vectors, host cells and are nearly and accombinant vectors, host cells and are also well and appropriate and accombinant vectors, host cells and account a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    diagnostic assays for qualitative changes in gene expression, particularly in qualitative changes that ladd to pathology; in gene therapy, and to detect mutations in genes encoding transporters. This is the amino acid sequence of a polypeptide related to the novel human
                                                                                                                                                                                                                                                               Novel human transporter protein, related to gamma-aminobutyric acid neurotransmitter transporter subfamily useful as model for developing human therapeutic targets and serves as target for human therapeutics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (GABA) transporter related protein

WO200272778-A2

The invention relates to a novel method for identifying a G protein coupled receptor (GPCR) signaling inhibitor. The novel method comprises selecting or identifying a member of a library of peptides and/or candidate compounds, having binding to a GPCR of higher affinity than that of the native peptide. The peptide library is based on a native GPCR binding peptide. The method is useful for identifying inhibitors of a G protein coupled receptor (GPCR) signaling. The method is particularly useful for identifying drugs that antagonise the binding between a GPCR and its extracellular ligand(s). The method is especially useful in modern high throughput screening assays for identifying potent lead or compounds. The compounds, peptides or inhibitors identified by the method are useful for preventing, amaliorating or treating diseases in which GPCR signaling is a causative factor or in which a specific class of G obesity, or psychotic and neurological disorders (e.g. anxiety, schizophrenia or Alzheimer's disease). This sequence represents a peptide relating to the G protein coupled receptors of the invention protein is relevant, e.g. stroke, myocardial infarction, restenosis, atherosclerosis, hypotension, cancers, infections, septic shock, pain, allergic disorders, asthma, inflammatory bowel disease, osteoporosis, Gaps Identifying G protein coupled receptor (GPCR) signaling inhibitors, useful in screening drugs for treating stroke, cancers or pain, by identifying compounds that block GPCR mediated signaling with high affinity and specificity. ö , DB 6; Lens. n. 1.3e+06; l; Indels 81.8%; Score 9; DB 6 66.7%; Pred.                                                                                                                                                                                                                                                                                      The invention relates to a novel method for identifying a g protein coupled receptor (GPCR) signaling inhibitor. The novel method comprises selecting or identifying a member of a library of peptides and/or candidate compounds, having binding to a GPCR of higher affinity than that of the native peptide. The peptide library is based on a native GPCR binding peptide. The method is useful for identifying inhibitors of a G protein coupled receptor (GPCR) signaling. The method is particularly useful for identifying duar that artagonise the binding between a GPCR and its extracellular ligand(s). The method is especially useful in modern high throughput screening assays for identified by the method are useful for preventing, ameliorating or treating diseases in which are serior and ecompounds. Proceeding the factor or in which a specific class of G protein is relevant, e.g. stroke, myocardial infarction, restenosis, atherosclerosis, hypotension, cancers, infections, septic shock, pain, allergic disorders, asthma, inflammatory bowel disease, osteoporosis, chizophrenia or Alzheimer's disease). This sequence represents a peptide relating to the G protein coupled receptors of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

The present invention describes a crystallised NCI domain hexamer of type IV collagen (I). Also described: (I) a chimeric polypeptide; (2) a inhibiting comprising the polypeptide and a carrier; (3) inhibiting andiopenseis in tissue; (4) treating an angiogenesis-mediated disease or condition in a mammal; (5) inhibiting basal manimal tissue; (4) inhibiting basal andiopenseis or extracellular matrix in an animal tissue; (6) inhibiting basal lamina membrane formation in cell or tissue development; (7) a crystal of an NCI domain hexamer of type IV collagen; (6) inhibiting soft type IV collagen; (7) a crystal of an NCI collagen assembly, and (9) an inhibitor of type IV collagen assembly. A crystallised NCI domain hexamer of type IV collagen (I) has cytostatic, antianteemic, ophthalmological, antianteriosclarotic and antiuloer activities, and can be used as an inhibitor of angiogenesis, tumour growth, tumour metastasis, endothelial cell adhesion, endothelial collaged for treating an angiogenesis-mediated disease or condition consisting of glaucoma, sickle cell anaema, ulcerative colitis, psoriasis, atherosclarosis, rheumatoid arthritis or blood-borne tumours cor for inhibiting basal lamina membrane formation in cell or tissue development. The methods are useful for inhibiting angiogenesis in the exemplification of the present interaction with the extracellular matrix in an animal tissue, and dentifying inhibitors of type IV collagen assembly. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New polypeptide, useful for treating an angiogenesis-mediated disease or condition consisting of glaucoma or blood-borne tumors or for inhibiting basal lamina membrane formation in cell or tissue development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score 9; DB 7; Length 4;

agene in a cell; (2) a signalling molecule useful in modulating expression of a gene in a cell and identifiable or obtainable by the method of (1); and (3) an inhibitor of nuclear factor (NF)-kappaB/Rel protein activation comprising a signalling molecule of (2). The signalling molecule has antiinflammatory, antiarthritic, dermarological and nephrotopical signalling molecule is useful for the cerebroprotective, cardiant, antibacterial, immunosuppressive, dermarological and nephrotopical cativities, and can be used as a NF-cappaB/Rel protein modulator. The signalling molecule is useful for the production of a pharmacoutical composition for the modulation of gene expression by inhibiting NF-kappaB/Rel protein activation. The method is useful for modulating sene expression, and for treating acute or chronic inflammatory diseases (e.g. arthritis), isohaemic event including cerebrovascular disease and ischaemic heart failure, anthrax, andicatalise, Addison's disease or Goodpasture's disease). The present sequence represents a peptide used in the exemplification of the
                                                                                                                                                                                                                                                        of
The present invention describes a method for modulating gene expression in a cell comprising providing the cell with a signailing molecule comprising a peptide or its functional analogue. Also described: (1) identifying or obtaining a signalling molecule comprising a peptide or its functional derivative or analogue capable of modulating expression of

The sequence is one of several possible accessory moieties which can be attached to the C-terminus of an anchoring moiety which in turn is linked to a targeting protein and a cytochast agent. When the anchoring peptide intercalates into the target cell plasma membrane the accessory moiety is translocated across the membrane and protrudes into the cytoplasm. It can then be phosphorylated by cellular kinases at neutral pi. This irreversibly anchors the complex to the membrane and may enhance the translocation into the cytoplasm. The complex is useful for treatment and diagnosis of tumours. See also AAR03435-60

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

fructose-bisphosphate aldolase (EC 4.1.2.13) I - fungus (Fusarium sporotrichioides) (fragracternate names: aldolase; fructose-1,6,-biophosphate triosephosphate-lase N;Alternate names: aldolase; fructose-1,6,-biophosphate triosephosphate-lase C;Species: Fusarium sporotrichioides C;Species: Pusarium sporotrichioides C;Species: Pasarium sporotrichioides C;Date: 20.Feb-1995 #text_change 23-Mar-2001 C;Accession: PA0075; PA0077 R;Chow, L.D; Fukaya, N.; Sugiura, Y.; Ueno, Y.; Tabuchi, K.; Tsugita, A. Submitted to JIPID, October 1994
A;Reference number: PA0051
A;Reference number: PA0051
A;Reference number: PA0051
A;Residues: 1-15 cCHO>
A;Note: this form (I) had a molecular weight of 30.6K and an isoelectric point of 5.3
A;Molecule type: procein
A;Residues: 1-15 cCHO>
A;Note: this form (II) had a molecular weight of 31.6K and an isoelectric point of 5.4
A;Residues: 1-15 cCHO>
A;Note: this form (II) had a molecular weight of 31.6K and an isoelectric point of 5.4
C;Keywords: aldehyde-lyase; carbon-carbon lyase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           fructose-bisphosphate aldolase (EC 4.1.2.13) III - fungus (Fusarium sporotrichioides) (f Species: Fusarium sporotrichioides C;Species: Fusarium sporotrichioides C;Date: 20-Feb-1995 #sequence_revision 20-Feb-1995 #text_change 23-Mar-2001 C;Accession: PA0102

Biochem. Biophys. Res. Commun. 181:131-136(1991).

-!- FUNCTION: IGF-binding proteins proteins in porcine serum.",

and have been shown to either inhibit or stimulate the growth promoting effects of the IGFs on cell culture. They alter the interaction of IGFs with their cell surface receptors.

-!- SUBCELJULAR LOCATION: Secreted.
-!- SIMILARITY: Contains 1 IGFSP domain.

-!- SIMILARITY: Contains 1 thyroglobulin type-I domain.

Tatus. Biochem. 198:201-210(1991).

LIGHTOR ACTIVITY: AFP + L-alanine + tRNA(Ala) = AMP + diphosphate + L-alanyl-tRNA(Ala).

CIT CATALYTIC ACTIVITY: AFP + L-alanine + tRNA(Ala) = AMP + diphosphate + L-alanyl-tRNA(Ala).

CIT CATALYTIC ACTIVITY: AFP + L-alanine + tRNA(Ala) = AMP + diphosphate + L-alanyl-tRNA(Ala).

CIT CATALYTIC ACTIVITY: AFP - L-alanine + tRNA(Ala).

CIT CATALYTIC ACTIVITY: AFP - L-alanine + tRNA synthetase family.

CIT CATALYTIC ACTIVITY: Belongs to class-II aminoacyl-tRNA synthetase; AFP-binding.

MINICALYTIC ACTIVITY: AFP - L-alanine + tRNA LIGASE II ALA; PARTIAL.

MAINOACYL-TRNA synthetase; Protein biosynthesis; Ligase; ATP-binding.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Rattus norvegicus (Rat).

Biophys. Res. Commun. 174:142-148(1991).

-1- FUNCTION: Vasorelaxant activity. Has a cGMP-stimulating activity.
-1- SUBCELLULAR LOCATION: Secreted.
-1- SUBLIARIAR LOCATION: Secreted.
-1- SIMILARITY: Belongs to the natriuretic peptide family.

antifungal and a linear antibacterial peptide in a termite insect.";
I. Biol. Chem. 276:4085-4092(2001).
I. Biol. Chem. 276:4085-4092(2001).
I. FUNCTION: Active against Gram-positive bacteria B.megaterium and
M.luteus, Gram-negative bacteria B.coli SBS363 and D22,
K.pneumoniae, S.typhimurium and P.aeruginosa, yeast C.albicans
and filamentous fungi F.culmorum, N.crassa, N.hematococca and
T.viridae. Inactive against Gram-positive bacteria B.subtilis,
S.pyogenes, B.thuringiensis and S.aureus, Gram-negative bacteria
B.cloacse and B.carotovora and filamentous fungus B.bassiana.
C.: Gubcacla and E.carotovora and filamentous fungus B.bassiana.
C.: INDUCTION: By bacterial infection.
C.: MASS SPECTROMETRY: WW=3001.8; METHOD=WALDI.
Antibiotic; Fungicide.

"Neuron-specific' protein gene product 9.5 (PGP 9.5) is also
rexpressed in glioma cell lines and its expression depends on cellular
growth state.";
PEBS Lett. 290:131-134(1991).
I. PEBS Lett. 290:131-134(1991).
I. PUNCTION: Ubiquitin-protein hydrolase is involved both in the
processing of ubiquitin protesse that recognizes and hydrolyzes
This enzyme is a thiol protesse that recognizes and hydrolyzes
This enzyme is a thiol protesse that recognizes and hydrolyzes
This enzyme is a thiol protesse that recognizes and hydrolyzes
This enzyme is a thiol.
-!- CATALYTIC ACTIVITY: Ubiquitin C-terminal thiolester + H(2)0 =
Ubiquitin + a thiol.
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SUBCELLULAR LOCATION: Oppopriasmic.
-!- SIMILARITY: Belongs to peptidase family C12.
MERCOR; C12.001;--
-- SIMILARITY: Belongs to peptidase family C12.
-- SIMILARITY: Delongs to peptidase family C12.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          InterPro. Mol. Microbiol. 9:569-577(1993).
-!- FUNCTION: MEMBER OF THE TWO-COMPONENT REGULATORY SYSTEM NTRE/NTRC
- INVOLVED IN THE ACTIVATION OF NITROGEN ASSIMILATORY GENES SUCH AS
GLNA. NTRC IS PHOSPHORYLATED BY NTRE AND INTERACTS WITH SIGMA-54.
-!- SIMILARITY: Contains 1 response regulatory domain.
                                                                                                                                                                                                                                                                                                                                                                     STRAIN=CE-3;

OM protein - protein search, using sw model

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
